CARRER OBJECTIVE

Junior Full-Stack Developer with MERN stack proficiency and a keen interest in backend. Experienced in building user-friendly web applications using MERN, Next.js, and TypeScript. Currently diving deeper into backend architecture and databases, and actively building an engineering mindset. I genuinely aim to deliver immediate value to the team while growing as a Full-Stack developer.

SKILLS

Technical

- Languages & Frontend: React.js, Next.js, JavaScript,TypeScript, SQL, HTML5, CSS3, Tailwind CSS,
- Backend & Database: Node.js, Express.js, MongoDB, Mongoose, PostgreSQL.
- Tools & Deployment: Netlify, Vercel, Surge, Render, GitHub, VS Code, Postman, Beekeeper Studio

Soft Skills

- Management Skills | Team Leading | Analytical Thinking | Adaptability

PROJECTS

Donate-A-Bite | MERN Stack *(07/2025-09/2025)* - Live Demo | Frontend | Backend

Online Food Waste Reduction Platform to reduce food waste and feed people in need, where restaurants donate food and charities request and claim it — built with React, Express.js, and MongoDB

Key Features:

- Implemented demo login buttons for each role that let users explore the platform immediately in one click.
- Integrated Stripe to handle payments so users can complete transactions instantly with a seamless checkout flow they already know and trust.
- Added functionality for donations, requests, favorites, and reviews, giving users complete self-service control to manage their data instantly without needing technical help
- Implemented an automated charity request system that lets users upgrade their roles online instantly, bypassing slow paperwork to start rescuing food faster.

Pick&Pack | Full Stack *(01/04/2026 -05/04/2026)* - Live Demo | Frontend | Backend

Smart Inventory & Order Management System to help daily users easily manage products, track live stock levels, and fulfill customer orders without headaches — built with Next.js, Express.js, and Mongoose

Key Features:

- Configured real-time stock deduction and duplicate prevention to block checkout errors so users never buy sold-out items.
- Utilizes a priority-based restock queue to sort low-supply items so users always know what to restock first.
- Implemented comprehensive product, category, and order systems with built-in analytics and activity tracking, enabling users to manage everything independently.
- Integrated an automated live activity log that tracks every critical system action, giving managers a transparent audit trail of stock adjustments and order updates.

EDUCATION

Bachelor of Business Administration, Accounting - National University | Bangladesh 01/06/2026 – Present
